Natan P.

Technical Artist | Unreal Engine

eremitecodex@protonmail.com · eremitecodex.art · +55 12 98186-7728

PROFESSIONAL SUMMARY

Self-taught Brazilian Technical Artist with over a decade of experience, based in São Paulo (UTC-3). Specialized in high-quality 3D asset production and technical art, creating high-fidelity assets while maintaining strict performance targets for mobile, console, and other constrained platforms.

Has provided services to companies worldwide, combining strong technical problem-solving with a full production pipeline approach.

Languages: Portuguese (native), English (fluent), French (studying)

3D INDUSTRY EXPERIENCE

Tech Artist | View IT Technologies (Canada)

Most recent role

- Responsible for creating high-quality product models featuring complex mechanical animations involving springs, moving parts, and platform-specific technical constraints.
- Delivered significantly more detailed models while working within the severe technical limitations of a legacy web platform.
- Prepared technical documentation proposing deep performance optimizations and more efficient implementation approaches.
- Advised the team on production techniques that improved both visual quality and runtime performance.
- Delivered consistent high-quality results throughout the entire contract and built strong working relationships with the team.

3D Artist / Technical Modeler | GHP Racing Custom Diecast

- Specialized in high-precision technical modeling, producing assets that had to match exact real-world scales with millimeter accuracy.
- Designed cars, boats, characters, and track elements for 3D printing.
- Created Funko-style figures for Globo TV and functional props for a Record TV soap opera, engineering precise fittings, joints, and screw placements.
- Strengthened ability to deliver highly realistic assets through rigorous precision modeling practices.

3D Artist / Technical Artist | Leal Apps LTDA

- Created over 400 body animations optimized for mobile devices.
- Modeled and edited new characters for a legacy platform with severe .DAE export limitations.
- Solved pipeline export issues and developed an automated pipeline that allowed simultaneous processing of 400+ asset files using Python scripts in Blender, drastically accelerating delivery.

Freelance 3D Artist & Technical Consultant | Multiple Clients worldwide

- Provided consulting and training on modern production workflows in Unreal Engine, Blender, and Substance Painter.
- Created low-poly scenes for AR applications (USA).
- Developed Instagram filters using Spark AR (Israel).
- Created product visualizations, including jewelry (Russia).
- Produced animations for Second Life (Australia).
- Delivered advanced body UV mapping with optimized mesh utilization and strategic UV layouts.
- Modeled characters for advertising campaigns and various 3D-printable objects for small companies.

Independent Research & Development

- Mastered the full real-time production pipeline: modeling, UV mapping, PBR texturing, materials & material functions, material-based FX, advanced rigging, animation with drivers and physics, UI design and programming (menus and interfaces), and Blueprint scripting.
- Strong hands-on experience creating and optimizing materials, material functions, and real-time FX solutions directly in Unreal Engine.

- Specialized in optimizing high-fidelity assets for severely constrained platforms (mobile and standalone VR).
- Developed custom production techniques and pipelines focused on performance on low-power hardware.
- Built multiple studies with advanced real-time physics systems to better understand and optimize physics performance.
- Highly proficient in Unreal Engine Blueprints (end-to-end projects) and capable of working with C++ when needed.
- Participated in game jams, organizing pipelines and managing small teams.

SOFTWARE & TOOLS

3D Modeling & Sculpting: Blender (primary, 10+ years) — open to transitioning to Maya

Texturing: Substance Painter

Game Engine: Unreal Engine

2D / Image Editing: Photoshop, GIMP, Krita

OBJECTIVE

Seeking a full-time Technical Artist position focused on high-fidelity asset creation and aggressive optimization for performance-constrained platforms.

Open to remote opportunities worldwide and willing to relocate if required. Flexible with time zones. Dedicated professional who fully commits to the team’s goals and delivers consistent results.
